Super Nutrient Solution

BIOLOGICAL SCRUBBER ECOSYSTEM

GES 1578 Super Nutrients manufactured by GES Biotek, LLC are formulated as a supplement to enhance the growth of acidithiobacillus thiooxidans and ferroxidans microorganisms in a biological scrubber ecosystem where the primary food source is H₂S in the foul air stream.

The formula is in a concentrated liquid, requiring only one-part nutrient to 3,500 parts of water (3,500:1 ratio). The nutrients are available in either 5-gallon buckets, 55-gallon drums, or 260-gallon totes.

The GES Biotek nutrient formula has a more-than-fifteen-year proven performance record of enhancing biological growth in biological scrubbers.

GES Biotek manufactures engineered nutrient-rich open-cell substrate from recycled glass material that would otherwise end up in a landfill. This continues our commitment to provide green product solutions for the next generations' demands—solutions that are good for people, good for the environment, and good for the planet.

GES Biotek is pleased to offer site-specific media selection and design support to create the ideal green environment for your application.
